

Power Emissions Control

"We believe PEC can make our environment 'Greener'
- one motor at a time."

Power Emissions Control (PEC) is an emissions enhancer that can clean up a Fossil Fuel engines exhaust emissions.

Our PEC unit turns water into burnable vapors that are then injected into the engines air way. The vapors mix with the normal air and fuel inside the combustion chamber and enable more of the fuel to be burned - before it reaches the exhaust - and catalytic converter. This new approach cleans out the carbon buildup and freshens the engine exhaust.

Benefits:

- Reduces polluting Greenhouse Gases
- Removes Carbon buildup in the combustion chamber and exhaust system
- Improves Engine Power
- Engines run cooler
- Oil stays clean longer
- Can lead to increased fuel economy
- Does not void your car warranty

PEC Unit - Characteristics:

- Designed specifically by PEC
- Proven Hydrogen Technology
- Very Small Container
- High Heat Nylon
- Water stays clean
- Built-in Mounting Brackets
- Easy to disassemble
- O-Rings seal the positive and negative electrical terminals
- Specially designed rubber gasket seals the lid.
- 1/4 inch Barb Fittings - for 1/4 inch hoses
- Designed to run on 5 to 20 amps
- Self regulates continuous use without the need of a PWM
